EDUCATION

Columbia University

New York, NY

Bachelor of Science in Computer Science

Expected Graduation: May 2028

- **GPA:** 3.76/4.00
- **Relevant Coursework:** Data Structures, Advanced Programming, AI, Analysis of Algorithms, C++ Deep Dive

EXPERIENCE

Infosys

Jun 2026 – Aug 2026

Software Engineering Intern

Bangalore, India

- Contributing to a distributed health-monitoring platform tracking 50+ internal projects and publications across Infosys Living Labs, serving 300+ engineers and cutting mean incident detection time to under 30 sec
- Building an incident reporting pipeline using NemoClaw to auto-generate root-cause reports within 10s of outage detection, correlating logs, recent commits, and faulty code to reduce on-call triage time by 60%

Cirque

Aug 2025 – Dec 2025

Software Engineering Intern

New York, NY

- Designed a React Native mobile wardrobe management app with Supabase authentication, photo storage/import, virtual outfit visualization features, and structured tagging/filtering across 5+ different clothing categories
- Refactored a static React.js frontend into a modular, component-driven architecture with dynamic routing and code splitting, reducing load times by 25%

Ideal Course Mapping VIP (Vertically Integrated Project)

Jan 2025 – May 2025

Undergraduate Research Intern – Georgia Tech

Atlanta, GA

- Designed a course-planning tool using topological sort given a student's major, credits, grade, and prerequisites
- Optimized client-side data fetching with Axios caching and skeleton loading, reducing latency by 20%
- Implemented CI/CD workflows, code review automation, and Git-based collaboration workflows

PROJECTS

Token Optimizer for Cursor | TypeScript, Node.js, Anthropic SDK

May 2026 – Present

- Designing a hooks-based package that intercepts Cursor's agent loop to reduce context bloat by 30%
- Implementing strategy modules for line-windowed file reads, bounded shell/grep commands, and structured MCP payload truncation, reducing tool-output tokens up to 65% on read- and grep-heavy agent calls

HungryLion | React, MongoDB, Node.js, Express.js

Jan 2026 – Feb 2026

- Developed a dining analytics web platform enabling 100+ students to browse and rate menus across 11 dining halls
- Built a Node.js web scraping pipeline using Axios and Cheerio to extract and normalize menu data into a RESTful API, implementing MongoDB caching with 6-hour refresh intervals to reduce redundant external requests
- Designed a cookie-based anonymous identity system enforcing one daily vote per user with live aggregate display

HTTP Web Server | C, Git, UNIX

Sep 2025 – Dec 2025

- Engineered an HTTP/1.0-compliant web server in C using the Berkeley sockets API, supporting HTTP GET requests and static file serving, serving as the presentation layer of a modular three-tier web architecture
- Designed a persistent TCP connection workflow to serve dynamic HTML content and generate protocol-compliant responses with manual header construction

LeetCode Randomizer | JavaScript, Chrome Extension API

Aug 2025 – Sep 2025

- Built a Manifest V3 Chrome extension that filters and randomizes 150 LeetCode questions
- Implemented event-driven session sync across extension contexts with real-time submission detection to gate problem progression

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript/HTML/CSS, Bash, TypeScript

Software/Frameworks: React, Node.js, Express.js, Linux/UNIX, Git

Developer Tools: Postman, Figma, Jira, Vercel, MongoDB, AWS

Interests: Basketball, Bowling, Tennis, Classical Music, Anime, Running
